

Problem statement	Inputs	Outputs	Outcomes
What are we trying to address?	What resources will we invest?	What will we do?	What effects will our outputs have?
Who is affected? How are they affected?	Who will we partner with? What could they invest?	What will we provide to our participants?	What changes will we see?
What is causing or contributing to the problem?	What else will be needed? How/where will we get it?	What will participants do in the program?	What potential outcomes could be hard to measure?
Examine the logic		Examine the logic	
Are these resources adequate?	Is it likely these outputs will lead to the desired outcomes? How?	Do these outcomes really address the problem/causes/contributors? How?	
Plan the evaluation		Plan the evaluation	
How will we measure resource use?	How will outputs be recorded?	How will outcomes be measured?
